

KEEPING YOUR STUDENTS & THEIR DEVICES SECURE

SHIELD EDUCATION DEVICES

Education institutions are our children's guardians and it's your responsibility to shield them from those who want access to their technology.

You've heard it all. Whether it's a virus that snatched their homework or a stranger that stole their laptop—here are the most common security issues preventing streamlined and secure hybrid education.

Every 53 seconds a laptop is stolen

Software solutions for remote access can include features to allow bypassing firewalls, locking, erasing, taking screenshots to capture the culprit, and much more.

Malware are sharks of the Internet

How do you avoid the malware-infested waters of the Internet? Well, you can't stop your students from surfing the web, but you can utilize intuitive security software that prevents them from accessing hazardous sites or phishing links.

Invasion of identity snatchers

Scams are everywhere, and criminals specifically target young minds with the things they value—like a pop-up ad that says they won the latest gaming console but time is running out or a phishing email that looks like it's from a teacher who needs urgent information.

Fraud detection software will block harmful sites and third-party pop ups.

SOFTWARE SOLUTIONS THAT KEEP STUDENTS SECURE

Software solutions exist for the most common risks your students will face, no matter what your budget is.

Leading developers offer built-in cybersecurity options that can be bundled with their hardware for monitoring your students and protecting their journey across the World Wide Web.

Tech Features

Here are five essential tech features that you want when you are looking to protect your students:

Automatic Updates

Updates help patch security flaws. Hackers are constantly evolving their techniques to breach security. Keeping your devices up-to-date with new protection won't let them use their old tricks.

Encrypted Hard Drive

Hackers have a lot of time on their hands to remove a stolen hard drive and read the files directly. Give your students and teachers devices with encrypted hard drives to protect their data.

Location Finding

Theft? Beyond just locating it, other location software features include remote wiping and locking to protect or erase private information, no matter the distance.

Automatic Data Backup

Secure sensitive and valuable data from threats by always having a recovery point that's regularly automatically updated.

Webcam Cover

Although a webcam can be turned off, hackers can still access it to spy—unless it's covered.
