

# CLOUDCHECKR FOR MICROSOFT AZURE

Microsoft Azure offers organizations intelligent, secure public cloud capabilities to innovate solutions at scale. The integrated tools and services within the Azure cloud platform provide enterprises, CSPs, resellers, and government agencies potential for increased agility and operational efficiency across IT and DevOps.

However, to effectively manage and optimize their cloud investment, organizations need a comprehensive governance solution to gain visibility into their cloud infrastructure. From departmental cost management all the way into enterprise-wide expense control, to security and compliance, and resource utilization paired with inventory usage trends—cloud management is essential.

CloudCheckr is a unified cloud governance solution for Microsoft Azure. Our sophisticated cloud management platform offers control and clarity for leading organizations to manage and optimize their public cloud investments. CloudCheckr offers a single pane-of-glass view of critical inventory and utilization activities to manage and reduce expenses, with intelligent insights to allocate and optimize costs effectively. Security monitoring ensures your Azure cloud stays safe and compliant while you grow.

CloudCheckr's customizable reporting and alerts give organizations the visibility they need to manage cost, inventory, and utilization within their Azure environment. With deeper intelligence across cloud infrastructure, organizations can turn insight into action to confidently scale their environment.

**CloudCheckr is available on the Microsoft Azure Marketplace and supports Azure Government and CSP account types.**
