

Empower your business with Dropbox

Every technical decision-maker wants to:

Protect their data

Store all files in one place

Reduce IT overhead

Lower costs

Simplify operations

That may sound like it'll take a gargantuan overhaul, but that's not the case. Replace your legacy file storage and sharing system with Dropbox Business and start empowering your organization.

File server modernization

Work anywhere, anytime

Dropbox makes all files securely available, no VPN required. Teams can even collaborate offline.

Smart Sync

See and access every file in your account and every folder that's ever been shared with you, right from your desktop, without taking up all your hard drive space.

Rock solid data protection

Files get an instant upgrade in protection, because everything put in Dropbox is stored on a distributed, reliable, N+2 redundant cloud infrastructure. You can even access past versions of files, so ransomware is a thing of the past.

Smarter collaboration

Team Folders

Team admins can create team folders that facilitate the sharing and managing of content with pre-created groups. Team folders also support nested folders with granular permissions.

Dropbox Paper

A flexible workspace where you can write text, task lists, or code, and also embed images, audio, and video from your favorite apps.

More than just file sharing

- Best-in-class sync technology
- 256-bit AES and SSL encryption
- MS Office 365 integration
- Single sign on (SSO) integration
- Unlimited API access to platform partners
- Audit logs, filtering, and exporting of 200+ events
- HIPAA compliance
